REXNORD™ OMEGA™ ELASTOMERIC COUPLINGS

LOWEST TOTAL COST OF OWNERSHIP

The unique split-in-half flex element and reversible hubs significantly decrease total costs by reducing inventory and assembly time.

Rexnord Omega Couplings are non-lubricated, material-flexing couplings utilizing a specially formulated polyurethane material engineered for maximum durability, strength and fatigue resistance. Omega couplings can operate in horizontal or vertical applications without additional components.

Easy installation and visual maintenance inspection make these couplings a perfect selection for a broad array of industrial applications.

FEATURES AND BENEFITS

- **Torsionally Soft Flex Element** cushions shock loads and vibration, extending equipment life.
- **Split-in-Half Element** design allows for simplified assembly and disassembly without disturbing hubs or connected equipment.
- **Polyurethane-to-Metal Bond** eliminates assembly and slippage problems associated with mechanically clamped designs.
- **Interchangeable Hubs** between close coupled and spacer coupling elements. Hubs have identical bolting patterns which allows for reduced inventory, and are reversible to accommodate a variety of shaft spacing arrangements. Hubs are available in carbon steel, 303-304 stainless steel, or with electroless nickel plating.

ELEMENT DESIGN OPTIONS

Omega Coupling elements are offered in Close Coupled (E), Spacer (ES), and Half Spacer (E/ES) designs to accommodate a variety of standard and non-standard Distance Between Shaft Ends (DBSE). Spacer elements offer multiple radial bolting holes that accommodate all shaft gaps between the minimum and the maximum using the same components. Sleeve extensions are supplied when shaft spacing requirements require a greater DBSE than the standard spacer element can provide.

ELEMENT OPTIONS

Standard

- General purpose applications requiring the highest misalignment capacity

Heavy Duty Yellow (HDY)

- 25% greater torque capacity over Standard element catalog ratings allows for possible coupling downsizing
- Interchangeable with existing hubs

Hydrolytically Stable Urethane (HSU)

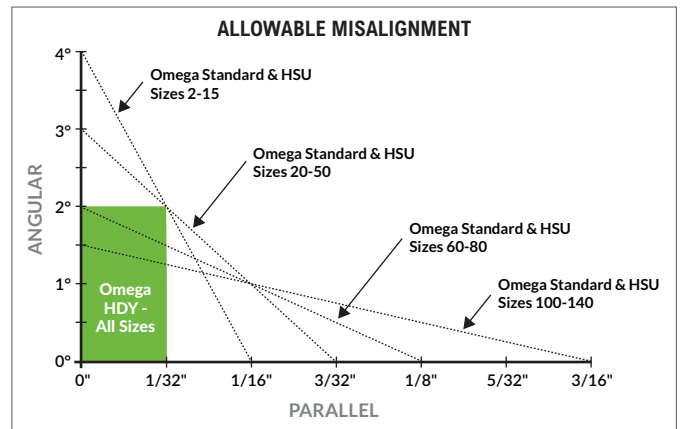

- Ideal for hot and humid conditions, acidic or alkaline environments
- 12-16 year shelf life
- Interchangeable with existing hubs

MISALIGNMENT CAPACITY

Omega Standard and HSU elements maintain their service life for any combination of parallel and angular misalignment measurements which fall on or below the line of the respective size. For Omega HDY, misalignment is limited to 2 degrees angular and 1/32" parallel. (Permissible misalignment values are shown in the yellow region and below the corresponding coupling size dotted line.)

Reliable and efficient equipment operation is directly related to coupling alignment.

ANGULAR MISALIGNMENT

PARALLEL MISALIGNMENT

Regal Rexnord™ is the leading coupling provider in the industry with a full-line of available solutions supported by trained customer service and application engineering professionals focused on our coupling product lines. For more information, visit regalrexnord.com, or contact (866)-REXNORD.

SELECTION PROCEDURES

1. Determine Operating Torque: $\left(\frac{63,025 \times \text{HP}}{\text{RPM}} \right)$

2. Multiply by Service Factor:

Select the proper Service Factor from Table on **page 5**.

3. Select the Coupling Size:

Select coupling size from **Table 1** with a capacity equal to or greater than determined in Step 2.

4. Follow steps 5 & 6 below.

— OR —

1. Determine HP/100 RPM: $\left(\text{HP/100 RPM} = \frac{\text{Horsepower} \times 100}{\text{RPM}} \right)$

2. Determine Service Factor:

Select the proper Service Factor from Table on **page 5**. If not listed, see Load Classification Table on **page 5**. Remember to consider both driver and driven equipment and temperature requirements.

3. Multiply HP/100 by the service factor to get equivalent HP/100 RPM.

4. Select the Coupling Size:

From **Table 1**, with a rating equal to or greater than the HP/100 RPM determined in Step 3.

5. Check Maximum Speed:

Be sure that the operating speed of the coupling does not exceed maximum RPM listed on **pages 6-10**.

6. Select Desired Hub Type:

Select hub type and check maximum allowable bore.

7. Select Element Design:

Select element design to meet shaft gap requirement.

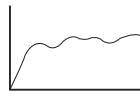

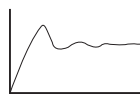

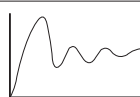

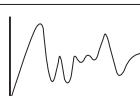

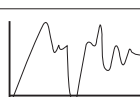

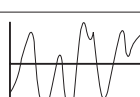

Table 1

Size		Continuous Torque (lb-in)	HP/100 RPM
Standard	Spacer		
E2	ES2	190	0.3
E3	ES3	365	0.58
E4	ES4	550	0.88
E5	ES5	925	1.48
E10	ES10	1,450	2.3
E15	ES15	1,800	2.86
E20	ES20	2,300	3.65
E30	ES30	3,650	5.79
E40	ES40	5,500	8.85
E50	ES50	7,650	12.14
E60	ES60	12,500	19.84
E70	ES70	22,125	35.12
E80	ES80	39,500	62.7
E100	N/A	85,050	135
E120	N/A	170,100	270
E140	N/A	340,200	540

Peak torque capacity of coupling is 250% of above continuous ratings.

SERVICE FACTORS

Service Factors are a means of classifying different equipment and applications into various load classifications. Due to variations in application of equipment, service factors are used to adjust equipment ratings to accommodate for variable loading conditions. This is a general guide. More specific factors are given on **page 5**.

	Load Classifications	Service Factors
	Continuous service and running loads vary only slightly.	1.0
	Torque loading varies during operation of the equipment.	1.5
	Torque loading varies during operation, frequent stop/start cycles are encountered.	2.0
	For shock loading and substantial torque variations.	2.5
	For heavy shock loading or light reversing drives.	3.0
	Reversing torque loads do not necessarily mean reversal of rotation. Depending upon severity of torque reversal, such loads must be classified between "medium" and "extreme."	Consult Regal Rexnord™

Omega™ Element Temperature Range (Ambient) ①	
-40° F	-40° C
to	
+200° F	+93° C

High Temperature Service Factor Adjustment ①	
Ambient Temp.	S.F. Adjust.
+150° F (66° C)	0.25
+165° F (74° C)	0.50
+180° F (82° C)	0.75
+200° F (93° C)	1

① Added to application service factor.

The service factor adjustment for high temperature is in addition to the service factor consideration for the driver and driven equipment. However, if high temperatures are typical for a specific application, maximum temperature consideration is incorporated into the "typical" service factor listing on **page 5**, i.e., steel mill runout tables.

TYPICAL SERVICE FACTORS – MOTOR & TURBINE DRIVEN EQUIPMENT^①

① The Service Factors listed are intended only as a general guide and for smooth power sources such as electric motors. For reciprocating prime movers, such as diesel or gas engines, add the following service factor:

For 8 or more cylinders, add 0.5

For 6 cylinders, add 1.0

For 4 cylinders, add 1.5

For less than 4 cylinders, consult Regal Rexnord

Add 0.5 to service factor if drive is a hydraulic motor.

Omega™ Couplings are not recommended for turbine drives if the coupling cannot be protected from steam leakage or from speeds in excess of the coupling's published rating (**pages 6-10**).

② Consult Regal Rexnord™ Engineering.

IMPORTANT NOTE: The coupling selection criteria is intended for the determination of the coupling and style only. It is also recommended that the system be analyzed for torsional stability using the specific coupling mass-elastic data available from Regal Rexnord. This analysis is the responsibility of the user since the coupling is only a single component in the system.

SLEEVE BEARINGS: Drive systems sensitive to axial movement such as sleeve bearing motors require the use of a limited end float ring to maintain axial positioning. Consult Regal Rexnord for design requirements and recommended installation practices.

CAUTION: Omega Couplings are not recommended for applications where both the driver and driven equipment are of reciprocating type. Contact Regal Rexnord Application Engineering for review of Omega Coupling selection for reciprocating applications.

OMEGA™ CLOSE-COUPLED DESIGN

NOTE: Hub shoulder design varies per coupling size. Consult Regal Rexnord™ for specific size assembly drawings.

- ① Suffix "R" designates high speed ring design. Rings are furnished standard for sizes ES2-R to ES15-R, optional for sizes ES20 to ES80.
- ② Spacer coupling furnished with optional high speed rings (sizes ES20 to ES80) can be operated up to maximum allowable speeds for standard series couplings. See RPM Ratings on [page 6](#).
- ③ Minimum shaft spacing is .125 inches. See [page 11](#) for additional information.
- ④ Overall length of element.
- ⑤ With max bore hubs.
- ⑥ See [page 15](#) for larger bore capacities with shallow keyways.

NOTE: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

OMEGA™ SPACER DESIGN WITH COMPRESSION BUSHED HUBS

① Suffix "R" designates high-speed ring design. Rings are furnished standard for sizes ES2-R to ES10-R, optional for sizes ES20 to ES80.

② With shallow keyway.

③ This rating may be limited by the bushing rating if severe service conditions exist. Consult bushing manufacturer.

④ Spacer coupling furnished with optional high speed rings (sizes ES20 to ES80) can be operated up to maximum allowable speeds for standard series couplings.

⑤ Minimum shaft spacing is 0.125". See page 11 for additional information.

⑥ Without compression bushings.

⑦ With steel bushings.

* See back cover.

NOTE: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

OMEGA™ EXTENDED SPACER COUPLING

Rexnord™ Omega Extended Spacer Couplings are designed to connect equipment with shaft spacing requirements beyond the Omega Spacer Coupling capabilities. The extended spacer design can be an economic alternative to floating shaft couplings (i.e. stock pump applications).

Sleeve extensions (“SE”) are furnished in steel. They mount to regular Omega Spacer Elements and all Omega Coupling Hubs. Sleeve Extensions can also be used to extend shaft gap capacity of larger size close coupled E100-E140 elements.

SINGLE EXTENSION

DOUBLE EXTENSION

① Maximum spacings shown are with hubs mounted outboard and flush with shaft ends. Longer custom length extensions are available; consult Regal Rexnord™.

② Hub/sleeve extension assembly precisely machined and matched to obtain higher speed rating. Specify “Matched Assembly” when ordering.

Ordering Information: Specify whether one or two sleeve extensions are required. Part numbers for sleeve extensions are listed on **Page 13**.

SPECIAL DESIGNS

OMEGA™ E/ES HALF SPACER ELEMENT

Option for a shorter element length than a standard ES spacer coupling. Available in Standard, HDY Yellow, or HSU Green materials.

Coupling Size	Dimensions (in)				Weight (lb) ②
	C		F		
	(In) ①	(Out)	(In)	(Out)

E80	1.47	7.38	11.50	17.13	175.0

① Minimum distance between shaft ends is .125 inches.
 ② With maximum bore hubs.

ELECTROLESS NICKEL PLATED HUBS

Omega Hubs can be supplied with electroless nickel plating, or machined in stainless steel material to provide advanced corrosion protection over standard carbon steel hubs for applications in harsh environments.

ADJUSTABILITY

Shaft Spacing Options

The Rexnord Omega Spacer Coupling design (pages 8-9) provides additional spacing between hubs. There are no interfering center member components which allows shaft spacing as small as .125 inches; however, for such small spacings, use of the standard Omega close coupled element would be recommended. The maximum shaft spacing for each coupling is shown on pages 8-9. Any shaft spacing between .125 inches and the maximum listed can be achieved without additional parts. Hubs can be mounted on shafts as shown below.

Overhanging Hubs

Hubs can be mounted flush with the shaft end (Figure A), recessed behind the shaft end (Figure B) or overhang the shaft end (Figure C). Shaft engagement with the hub should be greater than or equal to 80% of the hub length through bore. Compression bushed hubs require 100% shaft engagement.

Figure A

Figure B

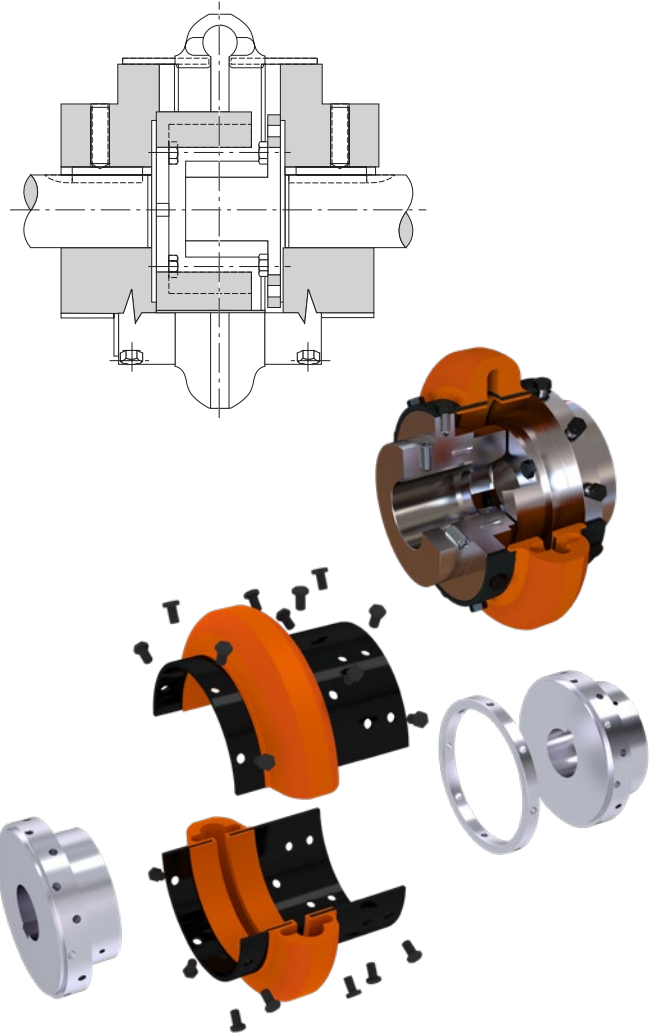

Figure C

REXNORD POSITIVE DRIVE COUPLING

Interlocking hubs to meet fail-safe requirements.

ORDERING INSTRUCTIONS

STANDARD AND SPACER COUPLINGS

When ordering a complete coupling, specify coupling size, type of element and hubs bores.

Element

- [E2 – E140] Close Coupled
- [ES2-R – ES80] Spacer

Hub

- [2HRB – 140HRB] Hub – Rough Bore
- [2HSB – 60HSB] Hub – Stock Bore
- [2HCB – 140HCB] Hub – Custom Bore (specify bore and keyway)
- [3HTL – 140HTL] Hub – Taper-Lock®* (bushing not included)

Order Example

Complete E50 close-coupled coupling with one finished bore 2-1/8" hub w/standard keyway and one QD hub less bushing. Order description:

- 1 ea. E50 Element
- 1 ea. 50HSB – 2-1/8" – std.
- 1 ea. 50 HQD – steel

SPLINE BORES

When ordering a complete coupling, specify coupling size, type of element and hubs bores.

1. Number of Teeth – Ex. 14T
2. Pitch Fraction – Ex. 12/24 Pitch
3. Pressure Angle – 30° P.A.
4. Type of Tooth Shape – Ex. Involute or Straight Side
5. Type of Root – Ex. Fillet or Flat Root
6. Tolerance – Ex. Class I through VII
7. Type of Fit – Ex. Side Fit or Major Diameter Fit

TAPERED BORES

1. Drawing of HUB showing complete bore and keyway details.

— OR —

2. Drawing of SHAFT with dimensions shown below, allowing Regal Rexnord™ to bore hubs to suit.

- (LD) Large diameter, specify in decimals.
- (S) Length of taper, measure parallel to shaft centerline.
- (T) Taper per foot, difference in diameter in one foot length.
- (P) Clearance space for drawing hub up on tapered shaft. Usually 1/8" or 1/4", depending on shaft size and taper.
- (N) Nut or keeper plate diameter

NOTE: Specify if keyway is parallel to taper or if parallel to shaft centerline. Specify keyway depth at larger diameter of taper if keyway is parallel to shaft centerline.

With connected equipment in fixed position, the following additional information is necessary:

Dimensions "V" and "X" must be given when one or both connected machines are fixed on their bases. Advise if dimension "X" is fixed, or if variable, between what limits.

A fixed "X" dimension may require variable positioning on the shaft, allowing for the use of a standard straight bore hub. See illustrations below.

* See back cover.

① High Speed Rings are furnished standard for sizes ES2-R to ES15-R, optional for sizes ES20 to ES80.

② Extra capscrews are provided for spacer couplings with rings.

* See back cover.

NOTE: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

BORE SPECIFICATION

Couplings will be bored in accordance with AGMA Standard 9002 for flexible couplings.

Finished bore hubs will be Class 1 clearance fit unless otherwise specified.

Shaft Dia.	Class 1 Clearance Fit	Interference Fit	Shaft Dia.	Class 1 Clearance Fit	Interference Fit
